EDUCATION

Bachelor of Applied Science in Software Engineering

University of Ottawa

September 2020 - January 2025

SKILLS

Programming Languages: Java, JavaScript, Python

Frameworks and Tools: Spring Boot, React.js, Next.js, PostgreSQL, MongoDB, Docker, Postman

Software Development: CI/CD pipelines, REST APIs, GraphQL, UI/UX design, QA, AGILE methodology

Soft Skills: Team collaboration, problem-solving, adaptability, time management, critical thinking, proactive learning, bilingual

EXPERIENCE

Software Engineer

Trolet

January 2026 - Present

- Architected a **warehouse location transmission pipeline** across **Java Spring Boot**, **AWS DynamoDB**, and third-party storefronts (**Shopify**, **eBay**), ensuring accurate and consistent product data propagation across all sales channels.
- Implemented an **AI agent** using the **Gemini Vision API** to automatically analyze shoe photos and extract product attributes, accelerating data entry workflows by **70%** and reducing manual input errors.
- Engineered an inventory intake interface in **TypeScript** and **Next.js**, including dynamic multi-select inputs, real-time field validation, and contextual info bars, streamlining the end-to-end employee onboarding workflow for new footwear.
- Designed and implemented a full-stack **audit logging system** using **DynamoDB** and **React**, enabling per-employee and per-product traceability with filterable logs by action type, step, date range, and SKU, accelerating operational error identification.

Systems Configuration Analyst

Shared Services Canada

May 2024 - August 2024

- Managed **application-to-server CI relationships** within the enterprise **CMDB (Onyx/ITSM)**, supporting incident impact analysis and improving infrastructure visibility across **30+ partner departments**.
- Processed and triaged environment configuration requests from multiple teams, coordinating changes across **dev, staging, and production** server environments and tracking deliverables with a **95% on-time delivery rate**.
- Contributed to automated **ticket routing workflows** by aligning configuration items with service lines, reducing manual triage effort and improving incident response accuracy.

Software Engineer

Employment and Social Development Canada

September 2022 - December 2022

- Developed a **Java Spring Boot** and **JavaScript** web application featuring data-driven pages for real-time analytics visualization, improving data accessibility for internal users.
- Managed and organized project documentation within **SharePoint**, implementing permissions to improve efficiency and security.
- Contributed to infrastructure (**Docker**, **Google Cloud**, and **CI/CD pipelines**) through critical bug fixes and continuous improvements.

PROJECTS

Customer Relation Management Platform | Java, TypeScript, Azure Active Directory, PostgreSQL, Twilio, Docker

- Enabled businesses to connect with their customers via Twilio's SMS gateway and perform bulk messaging and scheduled notifications.
- Designed a microservices architecture, separating services to ensure modularity and following the domain-driven design methodology.
- Achieved 90% test coverage in both frontend and backend using tools like JUnit, Mockito, Jest, Selenium and React Testing Library.
